Drill Bits

Ruwag offers users a complete range of the highest quality drill bits, to take on any project with confidence. Our convenient star rating system ensure the correct drill bit is always matched to the intended application, ensuring Ruwag's superior performance. Ruwag... the professional's choice!

Professional drill bits require packaging to suit

Our well designed bold and informative packaging, attracts attention and reinforces the Ruwag brand, whilst providing customers with all the info they need at a quick glance.

Ranges are colour coded for easy identification.

- Blue = Metal
- Grey = Masonry
- Brown = Wood

Large, clear labeling to indicate type of bit and suggested application.

Quality levels are labeled and colour coded throughout the range.

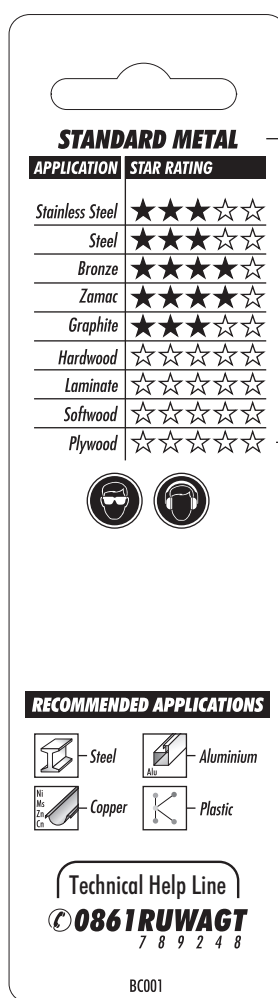

- White = Standard
- Blue/Grey = Industrial
- Gold = Titanium
- Black = Cobalt

Icons quickly indicate range of materials covered and are explained on the reverse.

FRONT

Technical specs for the well informed.

REVERSE

All Information is clearly summed up on the reverse for the customers benefit, ensuring the correct drill bit is always matched to the intended application.

Ruwag's effective star rating is clearly indicated on the front and explained on the reverse

FEATURE

Industrial, Titanium and Cobalt Ranges feature 135° Precision ground split points to prevent the bit from wandering.

Standard Metal

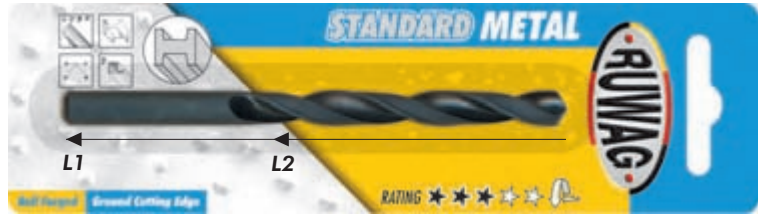

Standard metal bits are not as hard wearing as their industrial metal cousins and are thus better suited to light to medium duty drilling applications around the home.

Hex Industrial Metal

Best suited to Ruwag quick release magnetic adaptors for a secure fit.

Recommended for cordless drills

Begin drilling with bit centred on work piece to prevent oscillation.

Titanium Metal

Titanium metal bits offer excellent drilling performance into metal, and increased longevity due to their titanium coating. This makes them ideal for heavy duty drilling tasks.

Tile classification

Class 0: unsuitable for floors. These are generally used as wall tile.

Class 1: suitable only for locations where softer footwear is worn or where shoes are not frequently used, for e.g., residential bathroom or other areas with light traffic. Also for interior commercial and residential walls.

Class 2: suited for general residential traffic. For areas that are walked on by soft soled or "normal" footwear with very small amounts of scratching dirt. Not for kitchen, entrance halls, stairs and other areas subjected to heavy traffic.

Class 3: suited for all residential and light commercial areas such as offices, reception areas, boutiques, interior walls, countertops and residential bathroom floors. Not recommended for commercial entryway.

Class 4: suited for regular traffic. Recommended for medium commercial and light institutional use, such as restaurants, hotels, hospital lobbies and corridors.

Class 5: suitable for areas with heavy traffic, abrasive dirt and moisture, and where safety and maximum performance are required. Examples are shopping malls, public buildings, building entrances, swimming pools, or shopping centers.

If holes are drilled beyond the length of the flutes of the drill bit, the bit will lose the ability to clear debris causing it to seize in the hole and may result in damage to the drill bit or drilling machine.

Standard Brick

Standard brick bits perform best when drilling into plaster and brick, but aren't ideally suited to harder materials such as concrete or granite. This makes them perfect for DIY applications such as drilling holes in walls for hanging mirrors etc.

Industrial Concrete

Industrial concrete bits are hard wearing and as the name suggests are better suited to drilling into harder materials such as concrete, they perform brilliantly when drilling into plaster and brick.

Ruwag's SDS Professional drill bits have the edge.

Ruwag's unique cutting edge on sizes larger than 12 mm, concentrates the force delivered by a rotary hammer making them faster and giving up to twice the service life of other drill bits when drilling through reinforcing bar.

The wider asymmetric flutes maximise energy transferred from the rotary hammer striker to the tip of the drill bit. The thinner flute in the bit creates a larger space for the evacuation of debris from the drilled hole.

Only drill bits manufactured with state of the art technology within strict tolerance limits are granted use of the PGM (Prüfgemeinschaft Mauerbohrer) mark. The mark guarantees geometrically exact holes so that fasteners used will give firm support and achieve rated values.

RUWAG Holesaws at a glance

- Ruwag holesaws are made from tough fracture resistant HSS bimetal, ensuring fast accurate cutting and long tool life.
- Available in sizes from 14-210mm, with a maximum cutting depth of 32mm for all sizes.
- Ruwag holesaws give you clean, precise and circular holes in wood, gypsum boards, plastics, non-ferrous metals, aluminium, steel and stainless steel. (Remember to apply even pressure to prevent damage to the teeth.)
- Arbors and pilot drills are sold separately and are also available with an SDS shank for your convenience.

For best performance of bi-metal saws

- DO** Operate hole saw at recommended speed. See RPM table.
- DO** Apply sufficient feed pressure when sawing, about 80 to 100 pounds per inch of hole saw diameter. (More for harder materials, less for softer.)
- DO** Set the pilot drill point about 1/8" beyond the tooth points - enough to establish and hold a center. Better yet, drill pilot hole with 1/4" drill bit and use 1/4" drill rod for pilot. This is the way the professional does it.
- DO** Use a good grade of cutting oil to assure cleaner cut and longer blade life.
- DO** Chuck the hole saw properly.
- DO** Hold saw perpendicular to the surface of material being cut.
- DO** Hold hole saw and drive unit steady - drill press or lathe is best when possible.
- DO** Be sure to fix arbor to hole saw firmly. Drive pins should be fully engaged in drive pin holes. DO Keep drive pins locked into drive pin holes with threaded retainer.
- DO** Wear safety glasses and keep idle hands away from the sawing operation.
- DON'T** Run a hole saw too fast - it will cut faster at slow speed than at too fast a speed. If it runs too fast it will not cut, but wear out.
- DON'T** Allow tooth points to rub over the work without digging 3n to take a chip. Rubbing the tooth points dulls them so they can't cut.
- DON'T** Set the pilot drill point beyond the tooth points more than the thickness of the work. If the drill pierces the work before the saw teeth are in contact, the saw can hit the work with sufficient shock to break the saw or the teeth.
- DON'T** Operate hole saw without cutting oil (except in cast iron) or the abrasion will cause enough heat to damage the cutting ability of the saw.
- DON'T** Chuck too loosely or off center. An improperly chucked hole saw will cause damaging vibrations. DON'T Try to saw holes at an angle to the work surface. When teeth do not contact the work evenly the hole saw will be twisted out of round and will break.
- DON'T** Allow hole saw and drive unit to wobble or orbit around pilot drill, as this sets up damaging stresses to strip the teeth or break the saw. DON'T Begin sawing with arbor so loose in cap that it will
 - (1) Tear out threads in saw cap, or
 - (2) become inseparable (too tightly screwed in).
- DON'T** Allow drive pins to retract from holes while saw is in operation. Loose drive pins can grind a hole in the cap.
- DON'T** Let loose clothing or long hair get near a revolving, hole saw.

Universal Standard

Standard Universal Diamond Blades are suited to medium duty dry cutting in general building materials such as concrete, brick, stone and reinforced concrete.

Universal Industrial

Industrial Universal Diamond Blades are longer lasting and suited to heavy duty dry cutting in general building materials such as concrete, brick, stone and reinforced concrete.

Tile Standard

Standard Tile Diamond Blades are suited to medium duty dry cutting in ceramic tiles, Porcelain and slate.

Granite Industrial

Industrial Plus Granite Diamond Blades are as the name suggests the heaviest duty blades suited to heavy duty dry cutting in granite, hard stone and slate.

RUWAG HANDY HINT

- Ruwag Diamond Blades are dry-cutting blades that don't require water for cooling.
- Only use continuous rim tile blades when cutting tiles, a segmented blade will chip the tile.
- Only use the correct segmented blade for building materials, stone and granite, continuous rim blades don't resist heat as well as segmented blades.

Circular Saw Blades

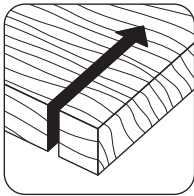

Ruwag Circular Saw Blades are tungsten carbide tipped for professional cutting results.

ATB (ALTERNATE TOP BEVEL)

Ground for ripping and cross-cutting in all types of wood.

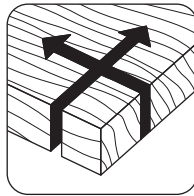

TCG (TRIPLE CHIP GRIND)

Ground for cutting hard materials like aluminium and plastic.

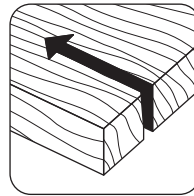

Crosscut Blade

Crosscut Circular Saw Blades are best suited for clean cutting across the wood grain in all types of wood.

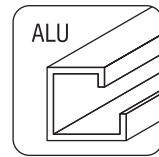

Combination Blade

Combination Circular Saw Blades are best suited for medium clean cutting both with and across the wood grain in all types of wood.

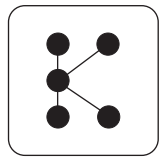

Ripping Blade

Ripping Circular Saw Blades are best suited for rougher and faster cutting with the wood grain in all types of wood.

Aluminium Blade

Ripping Circular Saw Blades are best suited for clean cutting in aluminium and plastic.

Application & Dimension info

Information regarding material that blade is suitable for

- Green** = Masonry
- Dark Blue** = Steel
- Light Blue** = Stainless Steel

oSa certification: Only issued to companies whose products and manufacturing techniques comply to CEN safety standards

Information for safe operation

Wear respiratory protection

Wear eye protection

Wear hearing protection

Wear gloves

Understand the power tool manual

Not to be lubricated with water

Not suitable for grinding (specific to cutting discs)

WARNING!

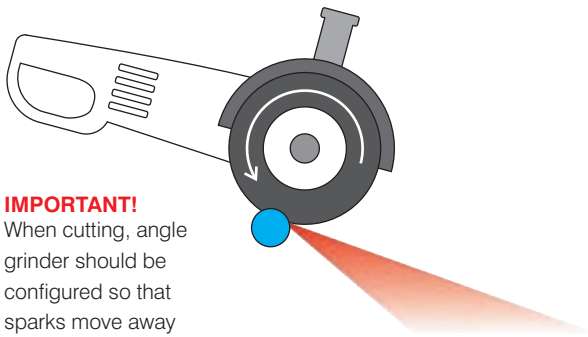

Never use an angle grinder without the safety guard, it serves 3 purposes:

- 1) Directs the flight of sparks
- 2) Prevents the use of oversized discs on the grinder
- 3) Protects the user from debris in case of disc failure

WARNING!

Never use bigger discs on an angle grinder than is recommended. Following are examples of the peripheral speed of abrasive discs when used on a 115mm angle grinder.

Angle grinder size	Disc size	Peripheral speed (km/h)
115mm	115mm	288
115mm	125mm	314
115mm	178mm	446
115mm	230mm	577

IMPORTANT!

When cutting, angle grinder should be configured so that sparks move away from your body.
